Key observations about caption style: **one declarative paragraph, two-to-three sentences, ~30-50 words**. Sentence 1 names genre + sub-style + vocal type ("Chinese reggae-influenced pop song with laid-back grooves, offbeat guitar skanks, and relaxed male vocals"). Sentence 2 names production details + mood ("warm bass, tropical percussion, and a carefree summer vibe"). **No BPM, key, or duration leaks into the caption** — those go in dedicated fields.

### Additional verbatim caption + lyrics examples from official docs

From [docs/en/INFERENCE.md](#) (canonical Python API examples)

```
python

caption="calm ambient music with soft piano and strings"
duration=60, bpm=80, keyscale="C Major"
```

```
python

caption="pop ballad with emotional vocals"
lyrics="""Verse 1: Walking down the streets today
Thinking of the words you used to say
Everything feels different now
But I'll find my way somehow
Chorus: I'm moving on, I'm staying strong
This is where I belong"""
local_language="en", bpm=72, duration=45
```

```
python

caption="energetic rock music with electric guitar"
lyrics="[Instrumental]" # use this literal token for instrumental tracks
bpm=140, duration=30
```
